

TALENT Course 2018

Many-Body Perturbation Theory Calculations

胡柏山 (Baishan Hu)

北京大学物理学院 (Peking University, Beijing, China)

July 31, 2018 @ Xinxiang

Outline

I. Introduction

II. Theoretical framework and calculations

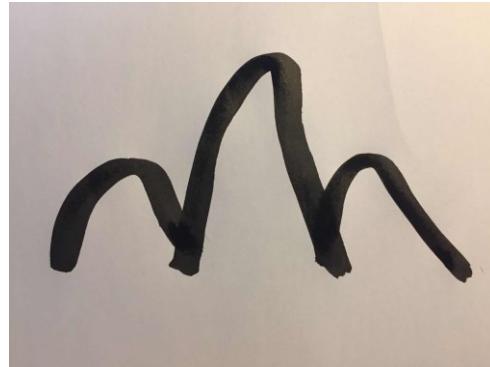

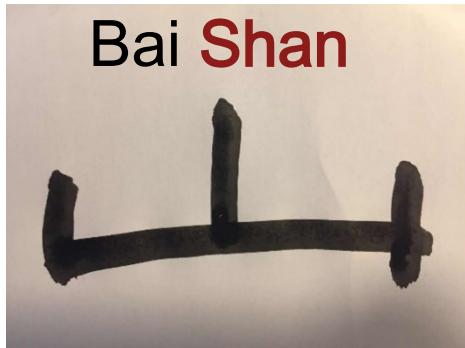

- a) MBPT for closed-shell nuclei
- b) MBPT (Q-box + folded diagrams) for open-shell nuclei

III. Summary and Outlook

Perturbation theory

takes us from a simple, exactly solvable (unperturbed) problem to a corresponding real (perturbed) problem

The key formulas in perturbation theory are

$$\hat{H} = \hat{H}_0 + (\hat{H} - \hat{H}_0) = \hat{H}_0 + \hat{V}$$

$$\hat{H}_0 \Phi_n = E_n^{(0)} \Phi_n$$

In MBPT the ambition is to include in H_0 as much “physics” as possible, so that V represents a “small” perturbation

History of MBPT

Key tool from 1950's to 1970's

- Rayleigh-Schrödinger perturbation theory
- G-matrix, Brueckner-Hartree-Fock method
- Valence-space shell-model interaction (Q-box + folded diagram)

Great depression in 1980's

- Depending on a starting energy parameter of G-matrix
- Poor convergence of the intermediate-state summations (tensor part)
- Intruder states

Today MBPT is coming back ...

- RSPT with soft potential ($V_{\text{low-}k}$, SRG, UCOM, OLS)
- Bogoliubov MBPT
- Auxiliary method (importance truncation, natural orbital basis)
- Realistic Gamow shell model (Extended Kuo-Krenciglowa method)

MBPT for closed-shell nuclei

$$\hat{H} = \sum_{i=1}^A \left(1 - \frac{1}{A}\right) \frac{\vec{p}_i^2}{2m} + \sum_{i < j}^A \left(\hat{V}_{NN,ij} - \frac{\vec{p}_i \cdot \vec{p}_j}{mA}\right) + \sum_{i < j < k}^A \hat{V}_{3N,ijk}$$

Rayleigh-Schrödinger perturbation theory

$$\hat{H} = \hat{H}_0 + (\hat{H} - \hat{H}_0) = \hat{H}_0 + \hat{V}$$

$$\hat{H}\Psi_n = E_n\Psi_n \quad \hat{H}_0\Phi_n = E_n^{(0)}\Phi_n$$

$$\Delta E = E_0 - E_0^{(0)}$$

$$\Psi_0 = \sum_{m=0}^{\infty} [\hat{R}_0(E_0^{(0)})(\hat{V} - \Delta E)]^m \Phi_0$$

$$\Delta E = \sum_{m=0}^{\infty} \langle \Phi_0 | \hat{V} [\hat{R}_0(E_0^{(0)})(\hat{V} - \Delta E)]^m | \Phi_0 \rangle$$

where $\hat{R}_0 = \sum_{i \neq 0} \frac{|\Phi_i\rangle\langle\Phi_i|}{E_0^{(0)} - E_i^{(0)}}$

$$E_0 = E_0^{(0)} + E_0^{(1)} + E_0^{(2)} + E_0^{(3)} + \dots$$

$$E_0^{(1)} = \langle \Phi_0 | \hat{V} | \Phi_0 \rangle$$

$$E_0^{(2)} = \langle \Phi_0 | \hat{V} \hat{R}_0 \hat{V} | \Phi_0 \rangle$$

$$E_0^{(3)} = \langle \Phi_0 | \hat{V} \hat{R}_0 (\hat{V} - \langle \Phi_0 | \hat{V} | \Phi_0 \rangle) \hat{R}_0 \hat{V} | \Phi_0 \rangle;$$

$$\Psi_0 = \Phi_0 + \Psi_0^{(1)} + \Psi_0^{(2)} + \dots$$

$$\Psi_0^{(1)} = \hat{R}_0 \hat{V} | \Phi_0 \rangle$$

$$\Psi_0^{(2)} = \hat{R}_0 (\hat{V} - E_0^{(1)}) \hat{R}_0 \hat{V} | \Phi_0 \rangle$$

Advantages in HF basis, compared with HO basis

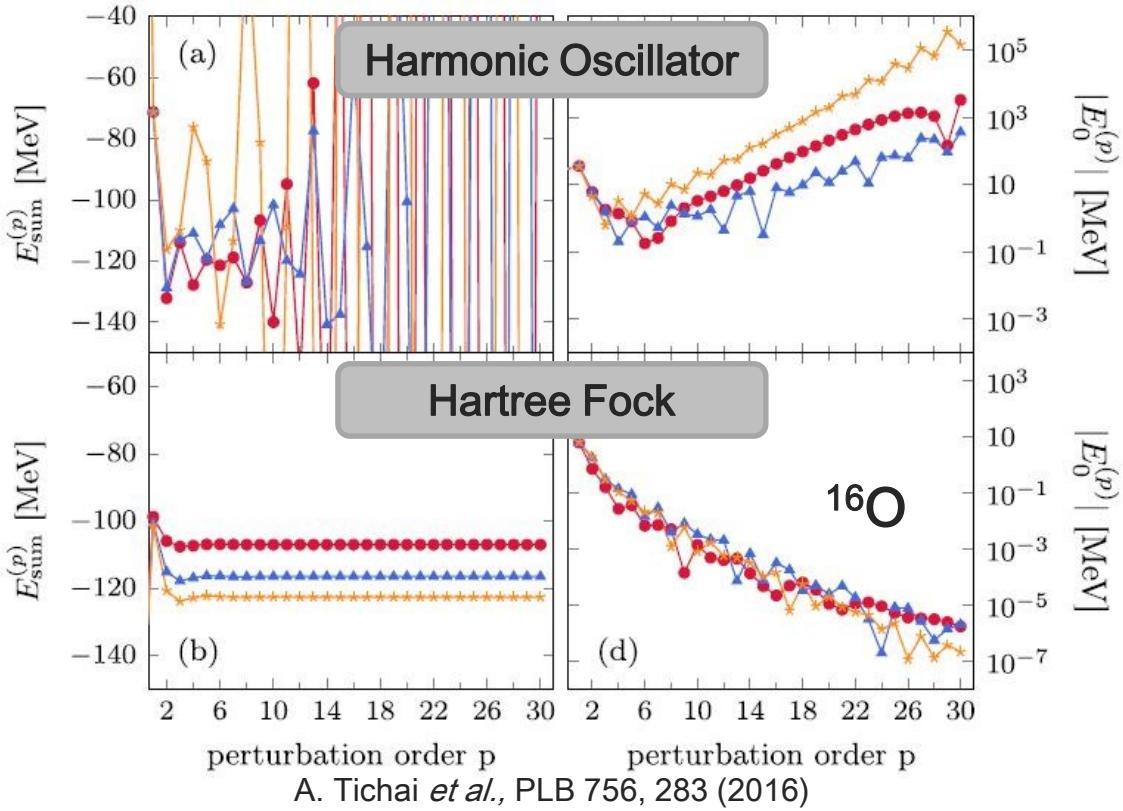

Faster convergence

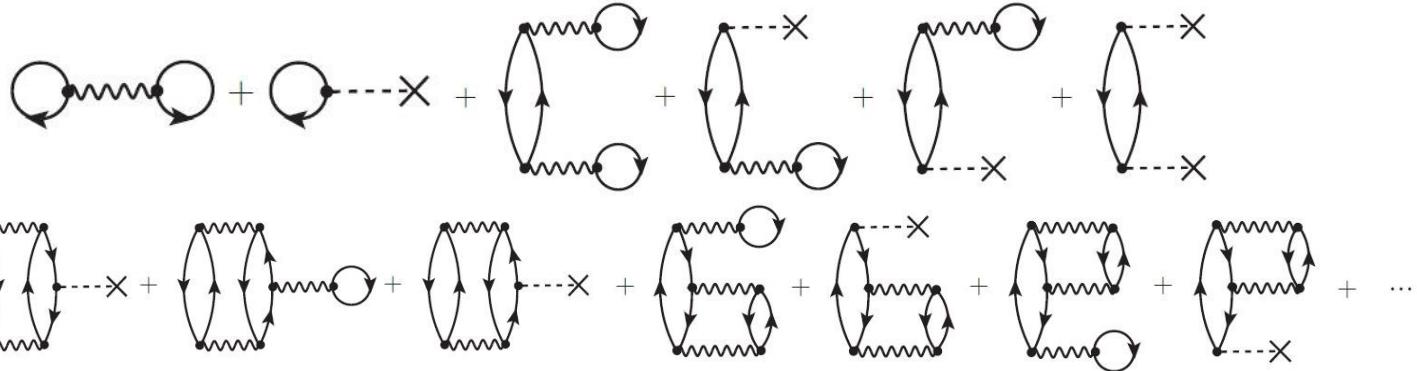

Some perturbation diagrams are cancelled out

In HO basis, calculations could be $\hbar\omega$ dependent, while much less in HF basis

$$E_0 - E_0^{(0)} =$$

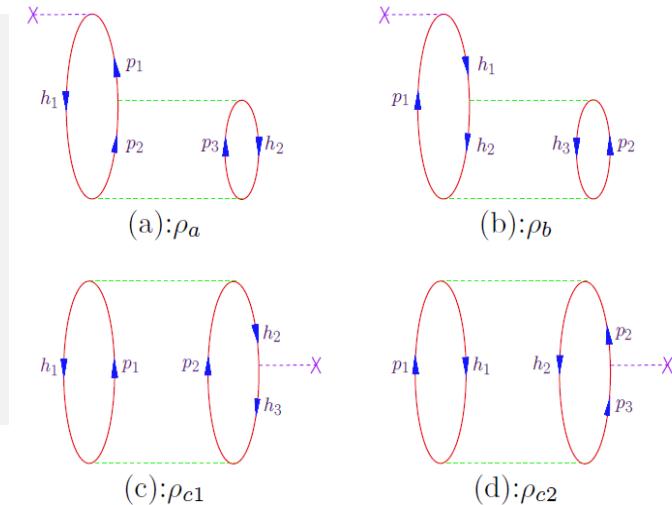

RSPT for closed-shell nuclei

- Perform a Hartree-Fock calculation
- HF state is chosen as a reference state H_0
- In the HF basis, make RSPT corrections
 - Energy up to 3rd order
 - Wave function up to 2nd order (One-body density)

$$E = E^{(0)} + E^{(1)} + E^{(2)} + E^{(3)} + \dots$$

$$-E^{(1)}$$

$$E^{(3)}$$

$$E^{(2)}$$

$$\Psi = \Phi_{HF} + \Psi^{(1)} + \Psi^{(2)} + \dots$$

$$\Psi^{(2)} \left[\begin{array}{c} \text{Diagram 1: Three nucleons with h1-h4, p1-p4, and a central interaction point I.} \\ \text{Diagram 2: Three nucleons with h1-h4, p1-p4, and a central interaction point I.} \\ \text{Diagram 3: Three nucleons with h1-h4, p1-p4, and a central interaction point I.} \end{array} \right]$$

$$\hat{H} = \hat{H}_0 + (\hat{H} - \hat{H}_0) = \hat{H}_0 + \hat{H}_1$$

$$\hat{Q}(E) = P\hat{H}_1 P + P\hat{H}_1 Q \frac{1}{E - Q\hat{H}_1 Q} Q\hat{H}_1 P$$

$$\frac{1}{E - Q\hat{H}_1 Q} = \sum_{n=0}^{\infty} \frac{1}{E - Q\hat{H}_0 Q} \left(\frac{Q\hat{H}_1 Q}{E - Q\hat{H}_0 Q} \right)^n$$

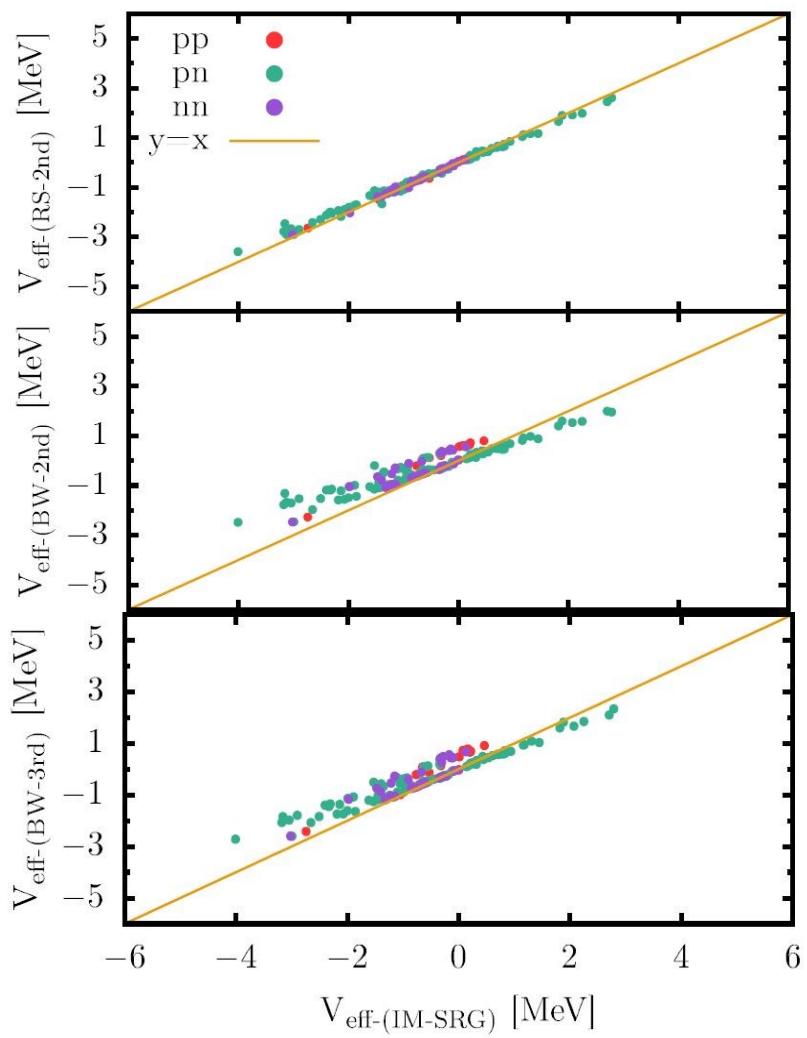

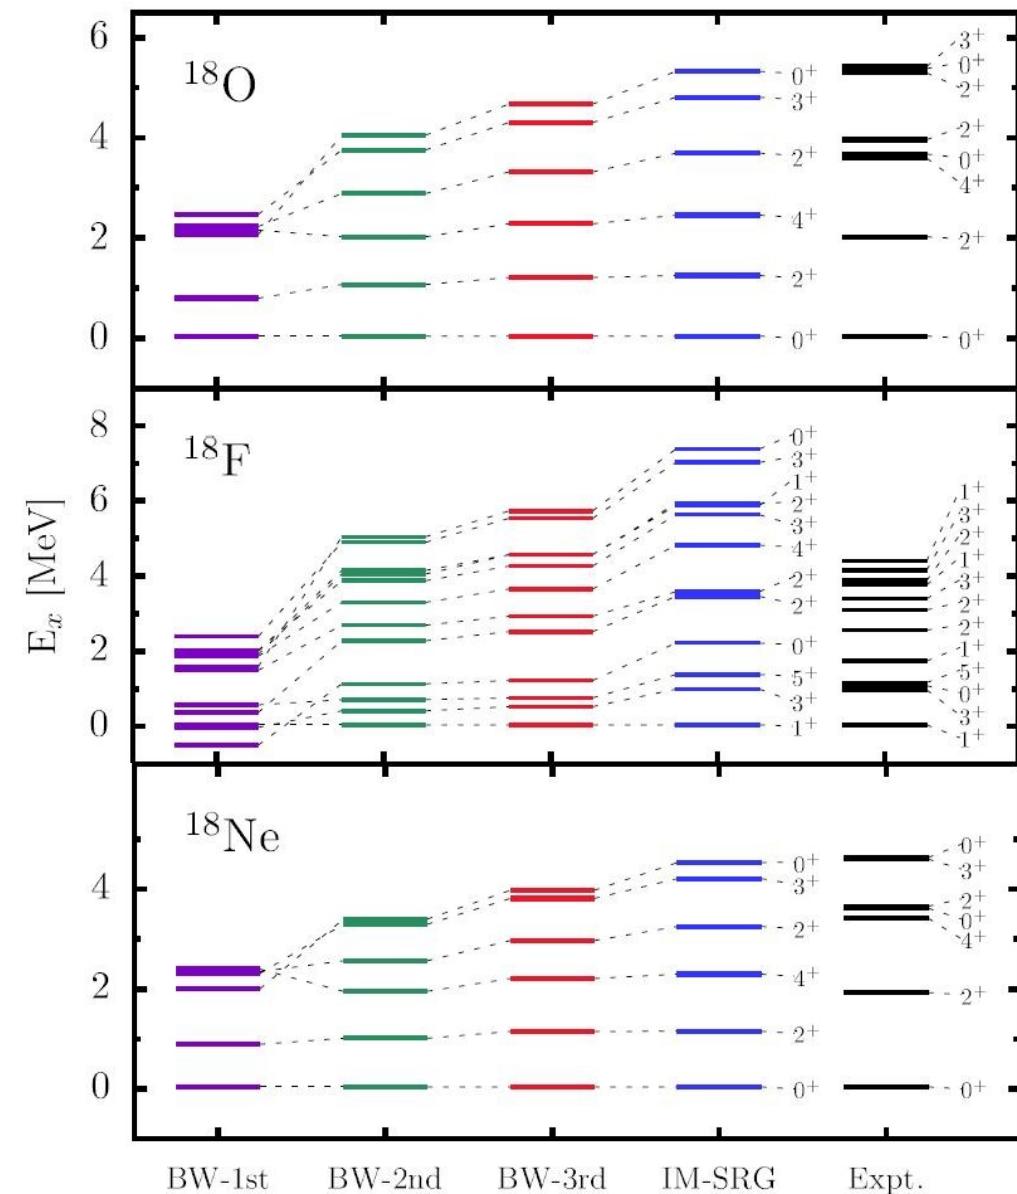

Up to third order

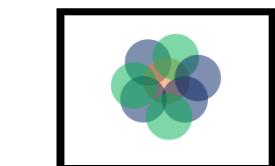

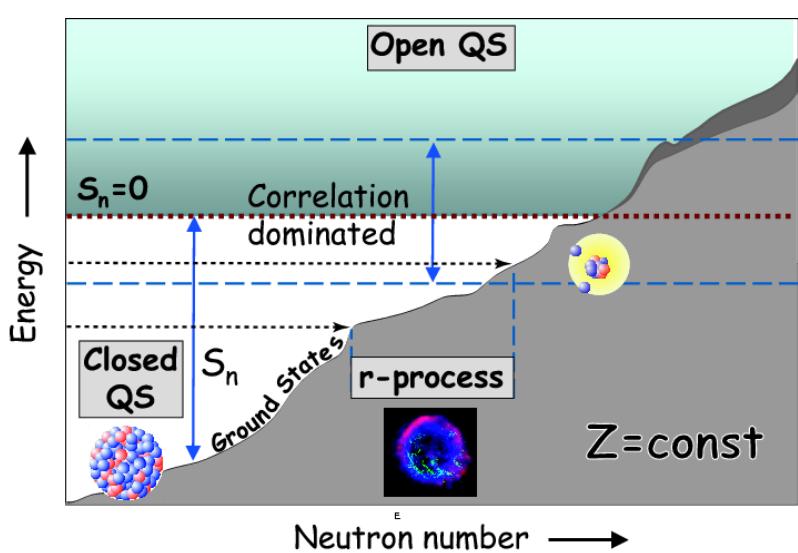

Extended
Kuo-Krenciglowa
method (EKK)

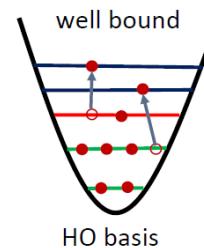

$$H_{\text{eff}} - E = P\hat{H}_0 P - E + \hat{Q}(E) + \sum_{k=1}^{\infty} \frac{1}{k!} \frac{d^k \hat{Q}(E)}{dE^k} \{H_{\text{eff}} - E\}^k$$

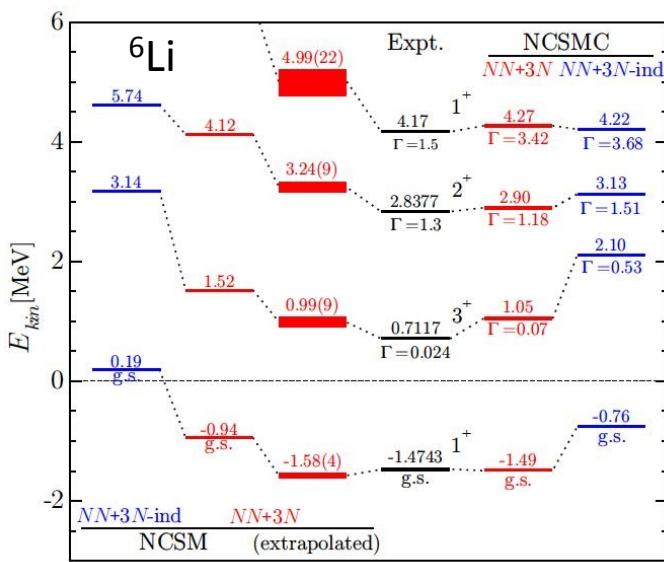

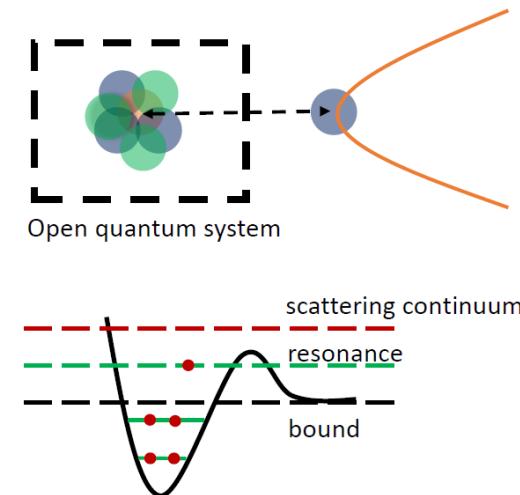

Nucleus as an open quantum system

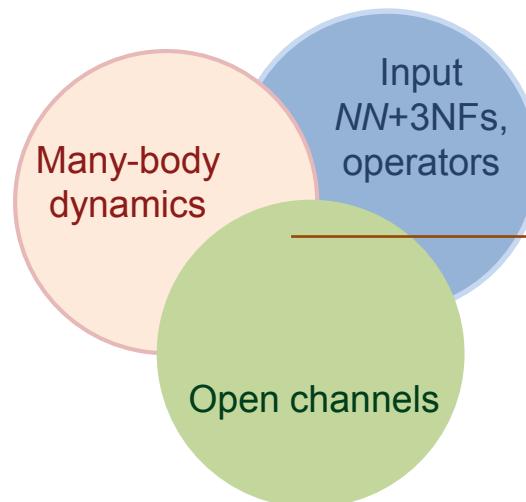

Closed quantum system

J. Phys. G: Nucl. Part. Phys. 36(2009) 013101

G. Hupin, S. Quaglioni, P. Navratil,
PRL114, 212502 (2015)

- Neutron/Proton-rich isotopes
 - Clustering in nuclei
 - New magic numbers
 - Intrinsic resonance
 - New collective modes
 - Halo

Bound, resonant and scattering states may be strongly coupled.
Need nuclear theory including the continuum.

Gamow-Berggren basis

The wave function of a resonance with a peak at energy e_0 and a width γ

$$\Phi(e, \mathbf{r}) = \sqrt{\frac{\gamma/2}{\pi[(e - e_0)^2 + (\gamma/2)^2]}} \Psi(\mathbf{r})$$

Through the Fourier transform, we obtain the time evolution of the resonance

$$\Phi(t, \mathbf{r}) = \Psi(\mathbf{r}) e^{-i\tilde{\epsilon}t/\hbar} \quad \tilde{e}_n = \frac{\hbar^2 k_n^2}{2m} = e_n - i \frac{\gamma_n}{2} \quad t_{1/2} = \frac{\hbar \ln 2}{\gamma}$$

Gamow state: Complex energy G. Gamow, Z. Phys. 51 (1928) 204

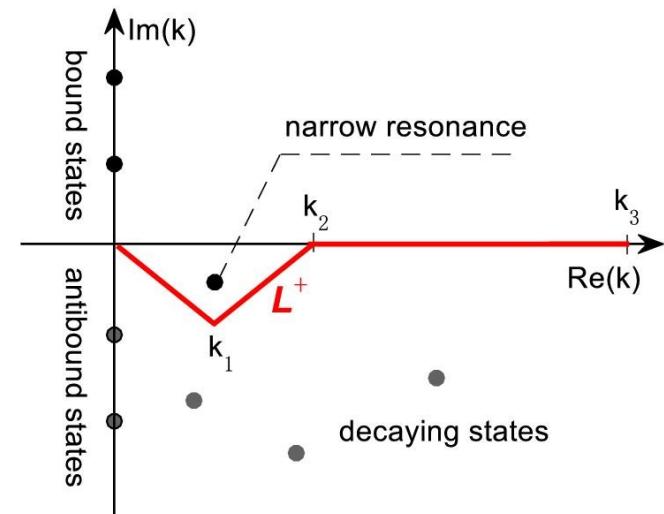

Berggren basis in complex- k plane, describing bound, resonance and scattering on equal footing.

T. Berggren, Nucl. Phys. A109 (1968) 265

Orthogonality and completeness

$$\delta(r - r') = \sum_n u_n(\tilde{e}_n, r) u_n(\tilde{e}_n, r') + \int_L d\tilde{e} u(\tilde{e}, r) u(\tilde{e}, r')$$

bound, resonance **scattering
(discretized)**

Gamow Hartree-Fock

Step ①: Solve the Hartree-Fock equations in HO representation using H_{int} ,

$$H_{\text{int}} = \sum_{i=1}^A \left(1 - \frac{1}{A} \right) \frac{\vec{p}_i^2}{2m} + \sum_{i < j}^A \left(V_{NN,ij} - \frac{\vec{p}_i \cdot \vec{p}_j}{mA} \right) + \sum_{i < j < k}^A V_{NNN,ijk}$$

Step ②: Extract the non-local HF potential $v(r,r')$

$$h_{ij}^{\text{HF}} = \langle i|t|j \rangle + \langle i|v|j \rangle = \langle i|t|j \rangle + \sum_{k=1}^A \langle ik|V|jk \rangle$$

Step ③: Obtain the radial wave function $u(r)/r$ in complex- k plane

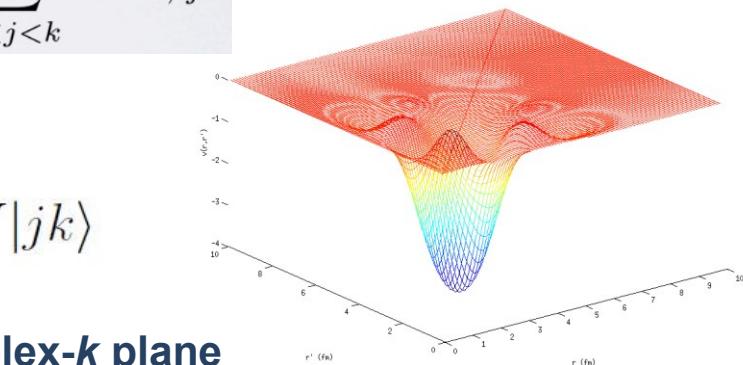

$$u''(r) = \left[\frac{l(l+1)}{r^2} + v^{(\text{loc})}(r) - k^2 \right] u(r) + \int_0^{+\infty} v^{(\text{non-loc})}(r, r') u(r') dr'$$

$$u(\tilde{e}, r) \sim C_0 r^{l+1}, \quad r \rightarrow 0, \quad \tilde{e}_n = \frac{\hbar^2 k_n^2}{2m} = e_n - i \frac{\gamma_n}{2}$$

$$u(\tilde{e}, r) \sim C^+ H_{l\eta}^+(kr) + C^- H_{l\eta}^-(kr), \quad r \rightarrow +\infty.$$

Exterior complex scaling

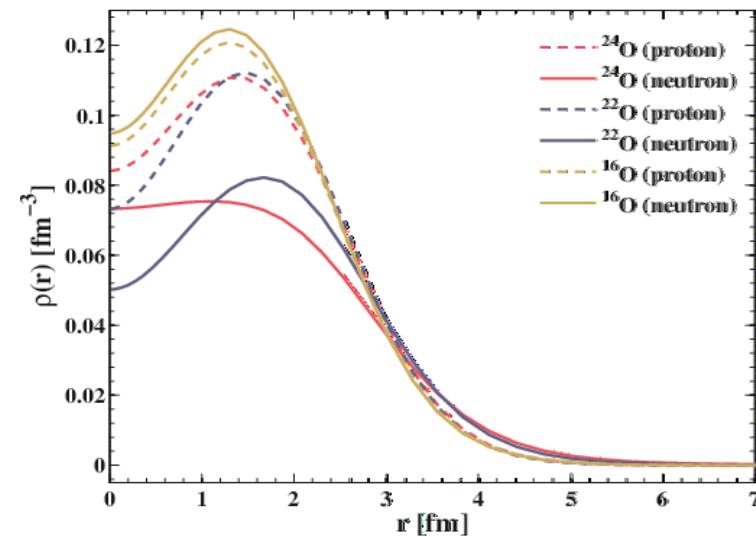

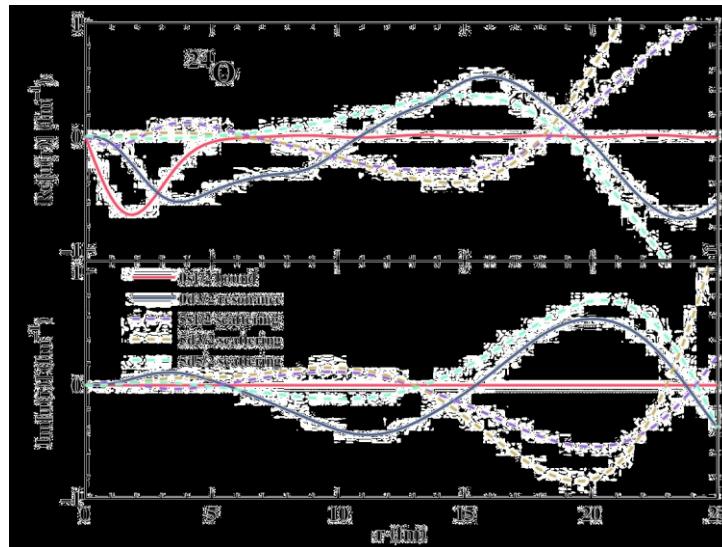

$$\begin{aligned} \int_0^{+\infty} u(\tilde{e}, r)^2 dr &= \int_0^R u(\tilde{e}, r)^2 dr + (C^+)^2 \int_R^{+\infty} H_{l\eta}^+(kr)^2 dr \\ &= \int_0^R u(\tilde{e}, r)^2 dr + (C^+)^2 \int_0^{+\infty} H_{l\eta}^+(kR + kxe^{i\theta})^2 e^{i\theta} dx \end{aligned}$$

Outgoing solution at large distance

$$u_n(\tilde{e}_n, r) \sim O_l(k_n r) \sim e^{ik_n r}$$

Gamow IM-SRG

**Hermite
(HO basis / real-energy HF)**

$$\langle a|H|b\rangle = \langle b|H|a\rangle^*$$

$$H(s) = U(s)H(0)U^\dagger(s)$$

$$U(s) \cdot U^\dagger(s) = U(s) \cdot U^{-1}(s) = 1$$

$$\eta(s) = \frac{dU(s)}{s} U^\dagger(s) = -\eta^\dagger(s)$$

$$\boxed{\frac{dH(s)}{ds} = [\eta(s), H(s)]}$$

**Complex symmetric
(Gamow-Berggren basis)**

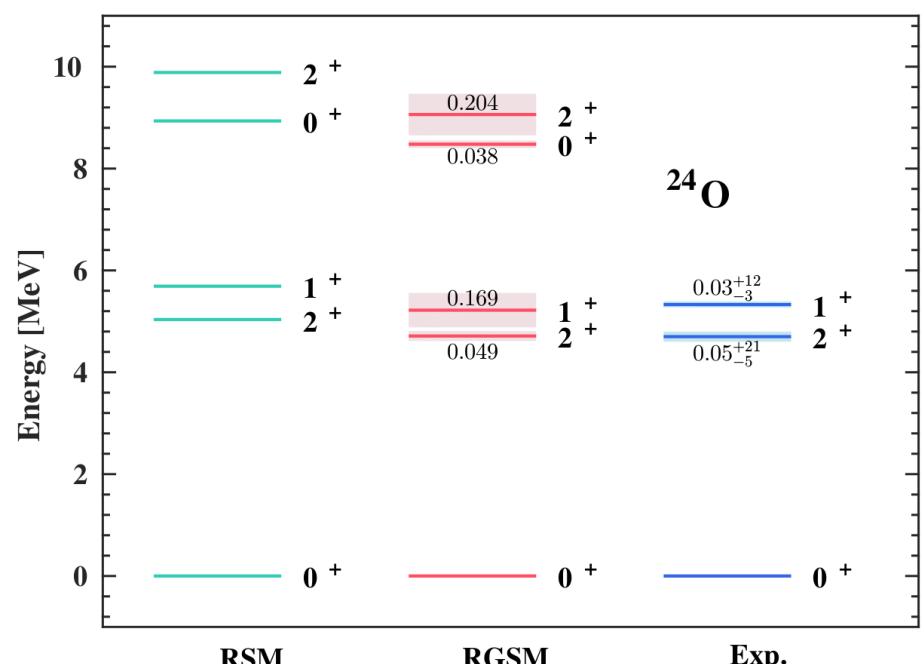

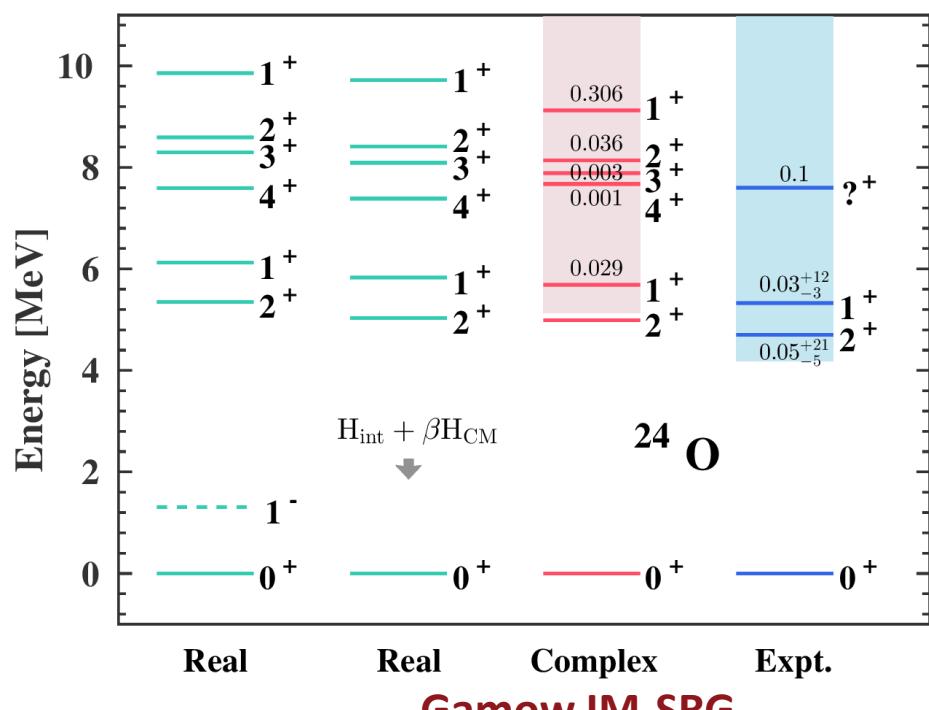

$$\langle \tilde{\alpha}|H|\beta\rangle = \langle \tilde{\beta}|H|\alpha\rangle^* = \langle \beta|H|\tilde{\alpha}\rangle$$

$$H(s) = U(s)H(0)U^T(s)$$

$$U(s) \cdot U^T(s) = U(s) \cdot U^{-1}(s) = 1$$

$$\eta(s) = \frac{dU(s)}{s} U^T(s) = -\eta^T(s)$$

Gamow IM-SRG vs RGSM

Summary

- Develop HF-RSPT including the wave-function and three-body force corrections.
- Develop the third-order RGSM within HF basis
- Describe oxygen and fluorine isotopes

Outlook

- Derive the cross-shell effective interactions (*sdpf*-shell, ...)
- Reconciling the microscopic valence-space effective interactions with the nuclear reaction theory (GSM-RGM)

The HF single-particle state $|\alpha\rangle_{\text{HF}}$ can be expanded on HO basis $|p\rangle$,

$$|\alpha\rangle_{\text{HF}} = \sum_p D_{p\alpha} |p\rangle. \quad (2)$$

We diagonalize the Hartree-Fock one-body Hamiltonian in HO representation,

$$\langle p|h^{\text{HF}}|q\rangle = \langle p|t|q\rangle + \langle p|U|q\rangle = \langle p|t|q\rangle + \sum_{i=1}^A \sum_{rs} \langle pr|V|qs\rangle D_{ri}^* D_{si}. \quad (3)$$

After iterative solution of the HF equations, we can obtain the HF potential

$$\langle p|U|q\rangle = \sum_{i=1}^A \sum_{rs} \langle pr|V|qs\rangle D_{ri}^* D_{si}. \quad (4)$$

The the channel

$$\langle k|h^{\text{HF}}|k'\rangle = (1 - \frac{1}{A}) \frac{\hbar^2}{2m} k^2 \delta_{kk'} + \sum_{pq} \langle p|U_{\text{HF}}|q\rangle \langle k|p\rangle \langle q|k' \rangle \quad (5)$$

where $\langle q|k'\rangle$ is the HO wavefunction in complex-momentum space $\langle k|$. It's noting that

$$\hat{\rho}(\vec{r}) = \sum_{k=1}^A \delta^3(\vec{r} - \vec{r}_k) = \sum_{k=1}^A \frac{\delta(r - r_k)}{r^2} \sum_{lm} Y_{lm}^*(\hat{\mathbf{r}}_k) Y_{lm}(\hat{\mathbf{r}})$$

$$\hat{\rho}(\vec{r}) = \sum_K \sum_{n_1 l_1 j_1} \sum_{n_2 l_2 j_2} \sum_{m_j} R_{n_1 l_1}(r) R_{n_2 l_2}(r) \frac{-Y_{K0}^*(\hat{\mathbf{r}})}{\sqrt{2K+1}}$$

$$\times \left\langle l_1 \frac{1}{2} j_1 \right| |Y_K| \left| l_2 \frac{1}{2} j_2 \right\rangle \langle j_1 m_j j_2 - m_j | K 0 \rangle$$

$$\times (-1)^{j_2+m_j} a_{n_1 l_1 j_1 m_j}^\dagger a_{n_2 l_2 j_2 m_j}$$

$$\Psi = \Phi_0 + \Psi^{(1)} + \Psi_b^{(2)} + \Psi_c^{(2)},$$

$$\rho(\vec{r}) = \langle \Psi | \hat{\rho}(\vec{r}) | \Psi \rangle$$

$$= \langle \Phi_0 | \hat{\rho}(\vec{r}) | \Phi_0 \rangle + \langle \Phi_0 | \hat{\rho}(\vec{r}) | \Phi_0 \rangle \langle \Psi^{(1)} | \Psi^{(1)} \rangle + 2 \langle \Phi_0 | \hat{\rho}_N | \Psi_b^{(2)} \rangle + 2 \langle \Phi_0 | \hat{\rho}_N | \Psi_c^{(2)} \rangle + \langle \Psi^{(1)} | \hat{\rho}_N | \Psi^{(1)} \rangle$$

$$= \langle \Phi_0 | \hat{\rho}(\vec{r}) | \Phi_0 \rangle + \langle \Phi_0 | \hat{\rho}(\vec{r}) | \Phi_0 \rangle \langle \Psi^{(1)} | \Psi^{(1)} \rangle + 2\rho_a + 2\rho_b + \rho_{c_1} + \rho_{c_2},$$

$$\rho_a = \frac{1}{2} \sum_{h_1, h_2} \sum_{p_1, p_2, p_3} \frac{(-1)^{j_{h_1} + j_{h_2}} \sqrt{2j_{h_2} + 1}}{(\varepsilon_{h_1} - \varepsilon_{p_1})(\varepsilon_{h_1} + \varepsilon_{h_2} - \varepsilon_{p_2} - \varepsilon_{p_3})} \sum_J (-1)^J (2J+1) \begin{Bmatrix} j_{h_1} & j_{p_1} & 0 \\ j_{h_2} & j_{h_2} & J \end{Bmatrix}$$

$$\times \langle (h_1 h_2) J | \hat{\mathbf{H}} | (p_2 p_3) J \rangle \langle (p_2 p_3) J | \hat{\mathbf{H}} | (p_1 h_2) J \rangle \langle h_1 \| \rho \| p_1 \rangle,$$
